

WIND CATCHER

ENERGY CONNECTION

Project Map

In early 2018 the company will begin working with landowners along the proposed route for the Wind Catcher Energy Connection Project. Open houses are being held in the area highlighted below to explore additional routing options to the south. In mid-January the company added southern study segments that utilize a combination of new and existing rights-of-way for consideration and is holding open houses on those study segments in early February. Ultimately only one contiguous route from Western Oklahoma to the Tulsa area will be built.
