

# WIND CATCHER

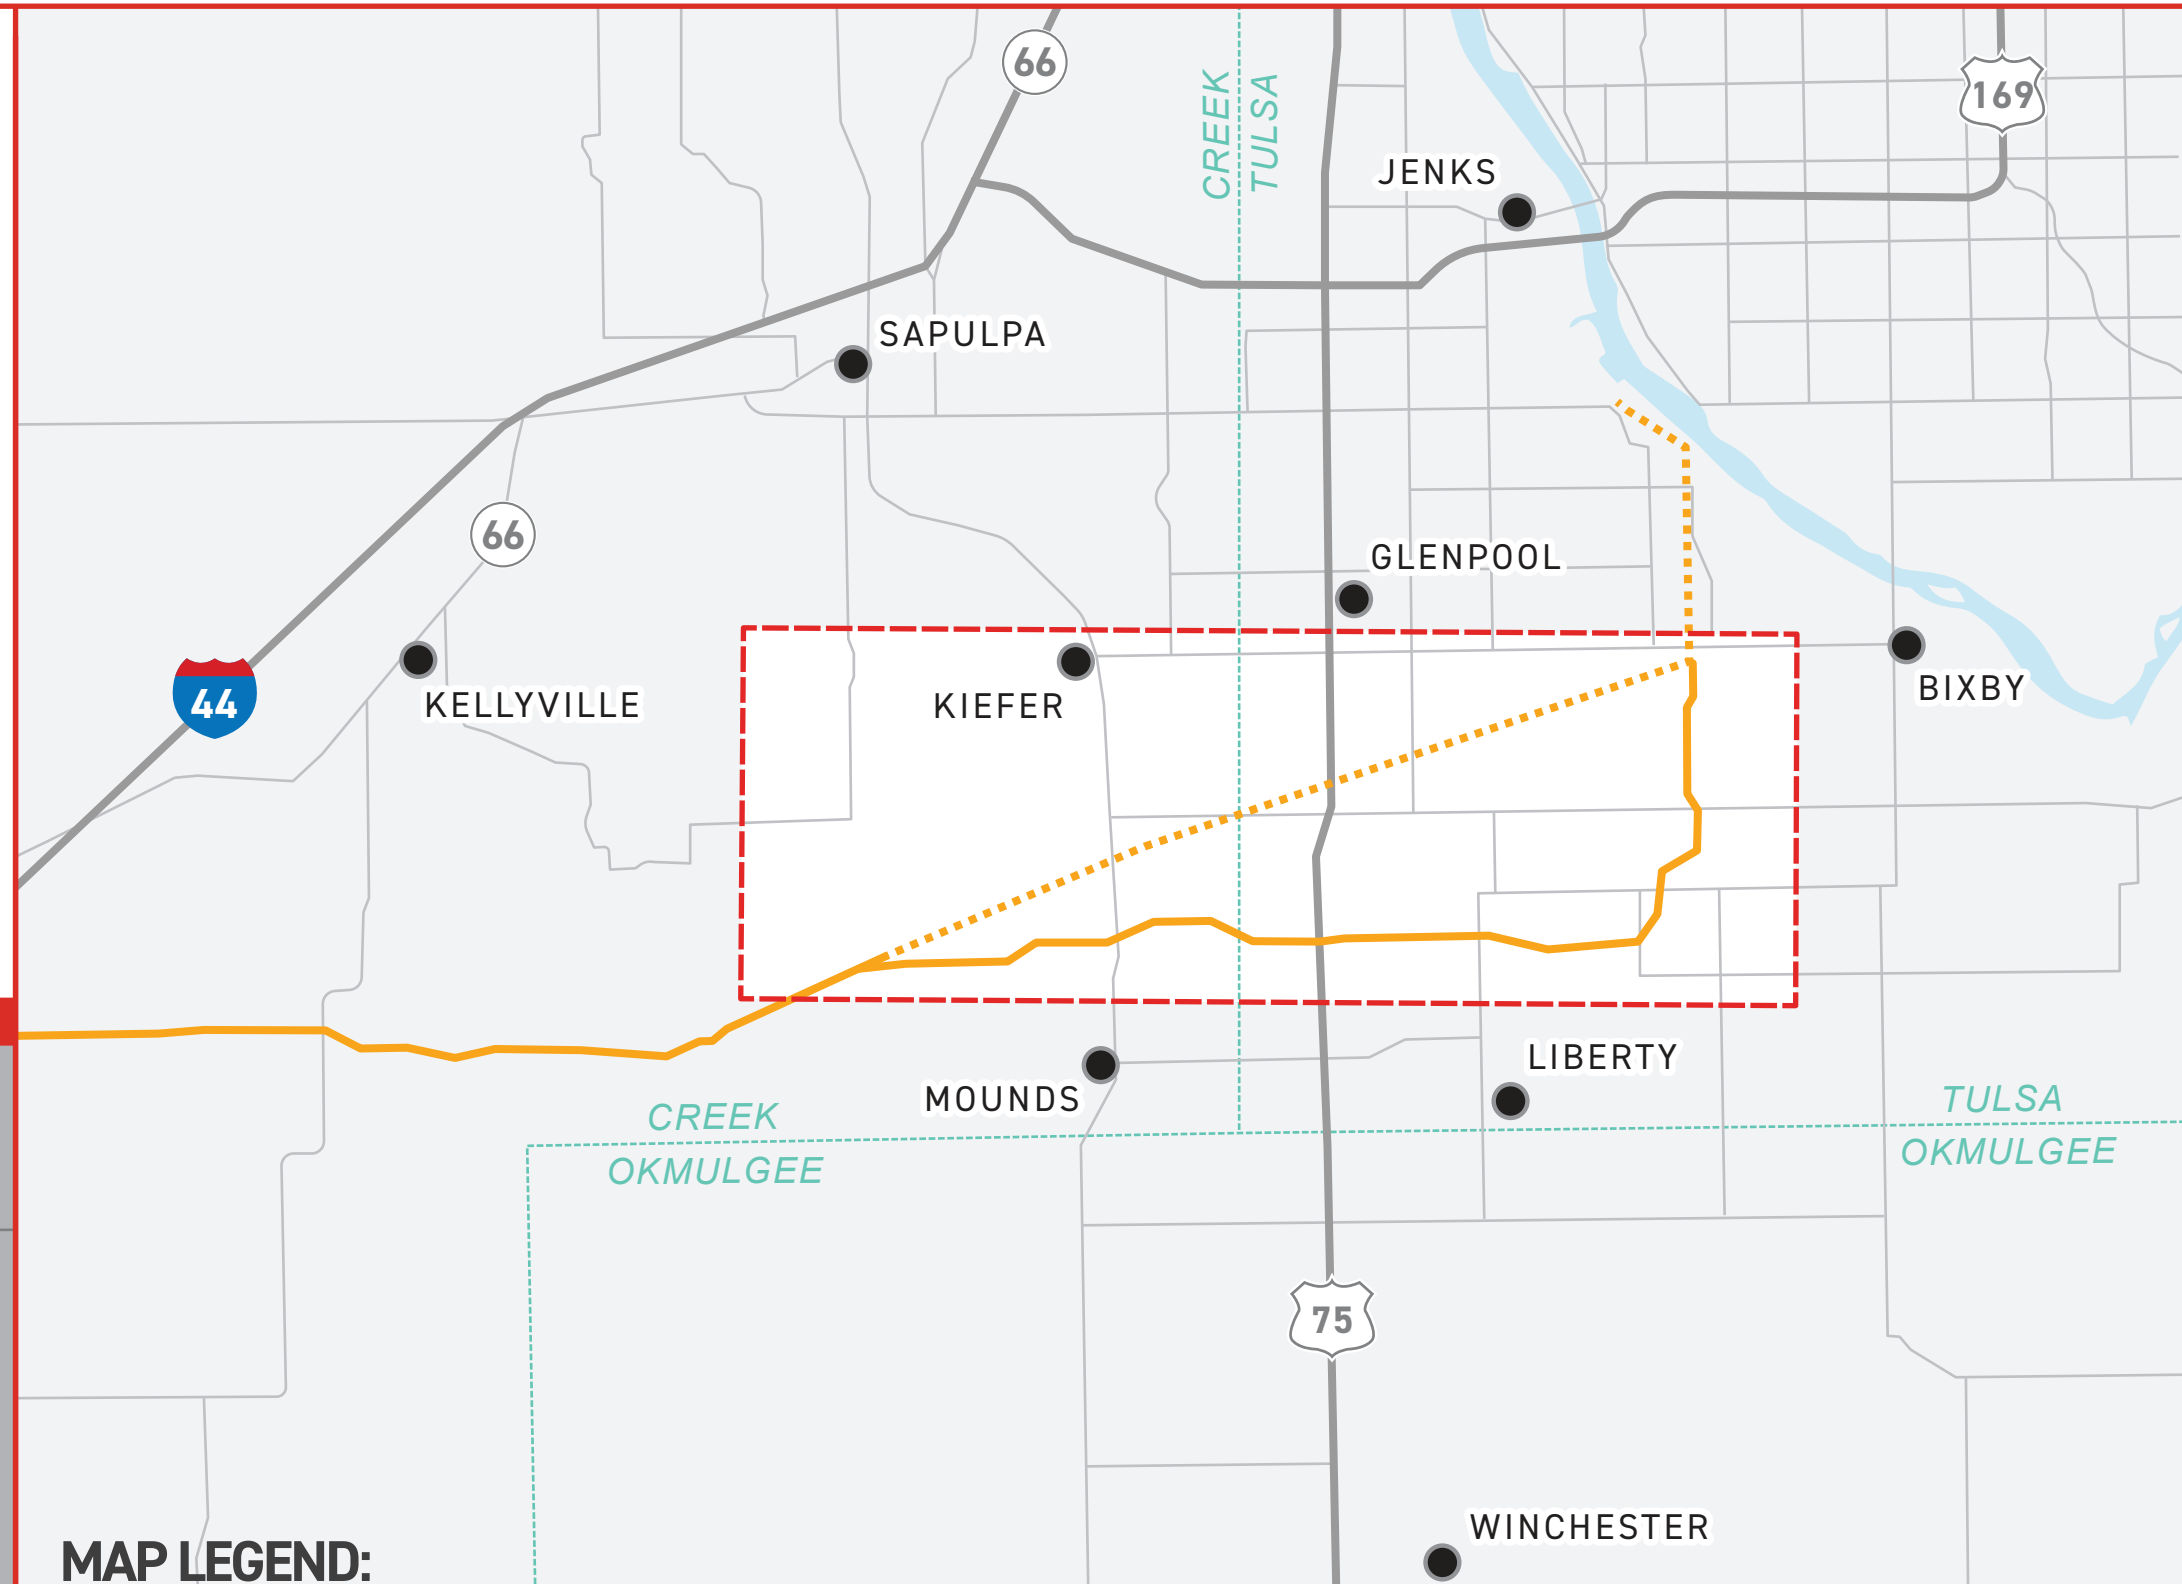

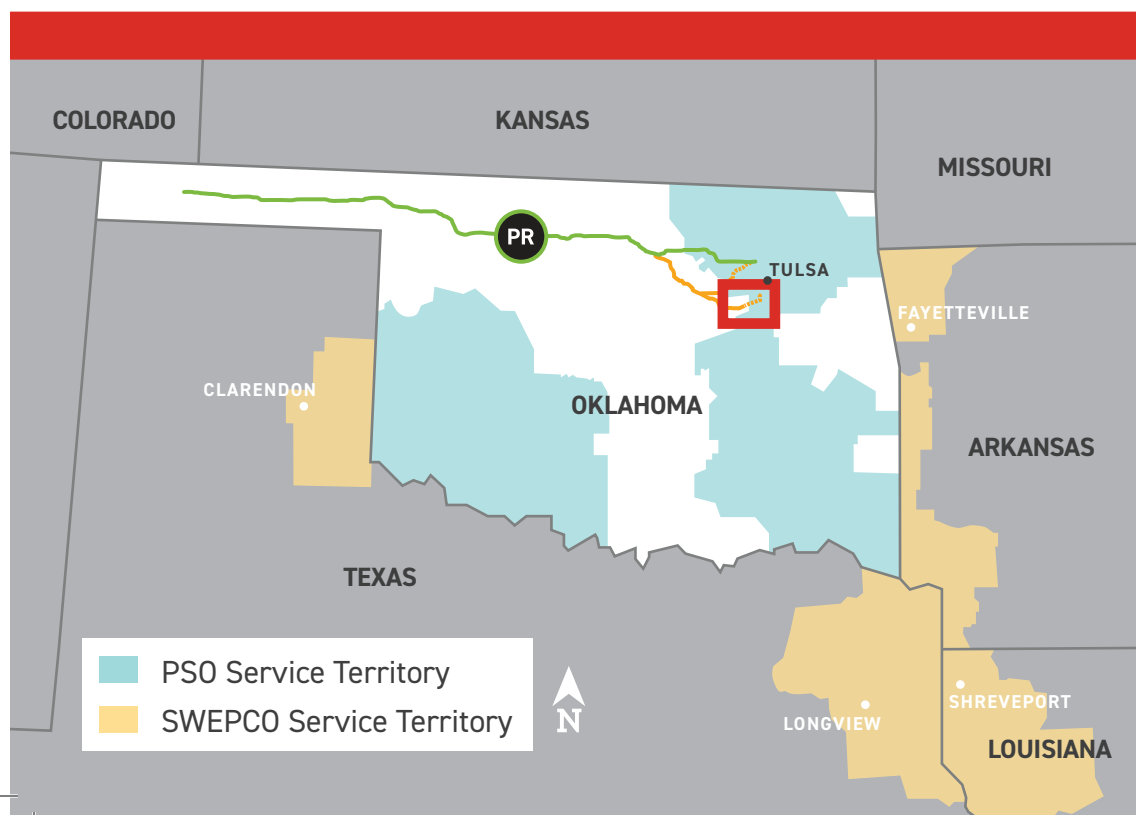

## ENERGY CONNECTION

### Project Map

Following an extensive public comment period, the company announced a preferred power line route in January 2018. Alternative routes for the eastern portion of the line that use a combination of new and existing rights-of-way have been evaluated in recent months. The next step in refining the alternative routes is to gather further input on the highlighted study segment. Ultimately only one contiguous route from Western Oklahoma to the Tulsa area will be built.
